

Intelligent Refractor RT-3100

THE ART OF EYE CARE

Reliability and Technology

Sophisticated design and comfortable examination at the same time

The RT-3100 empowers you to perform operations seamlessly and accurately. The Eye Care card system, printer and quick software upgrades strongly support the examination process. In addition to these functions, connection to EMR (Electric Medical Record) and comparison between auto refractometer and lensmeter data can be performed with the single touch of a button.

Operator-oriented Control Box

■ Intuitive color LCD touch screen

The 5.7-inch color LCD touch screen displays all data with high visibility. Simple, understandable, and comfortable user interfaces ensure an effective operation.

■ Easy on-off LED lamp

LED lamp for VA chart and near point chart can be easily turned on/off, by touching the icon on screen.

■ Jog dial with S/C/A mode key

The jog dial on the control box provides smooth operation. The S/C/A mode key on the center of dial allows the operator to quickly change sphere, cylinder and axis powers using only one hand.

■ Cross cylinder test

Cross cylinder test is effective for determining the astigmatism correction. Axis adjustment is accomplished with the touch of a button. Spherical power is adjusted automatically to maintain spherical equivalent.

Built-in High Speed Line Printer

The RT-3100's control box includes a built-in, high-speed printer. It automatically prints out the measured results, and the data is simply laid out so that operator can easily explain to patients. Replacing the paper is totally effortless and takes only a few seconds.

Easy Software Upgrades

Quick and easy future upgrades can be performed with CompactFlash* card.

*CompactFlash is a trade mark of SanDisk Corporation.

Ergonomically-designed Refractor Head

■ Comfortable examination

The RT-3100 has a sophisticated, ergonomic design. Furthermore, visual field of 40 degrees provides a spacially open and comfortable examination for patients.

■ Smooth, quick, silent lens selection

The control box makes it smoother, quicker, and more accurate to refine sphere, cylinder, axis, and prism lenses compared to examinations with the manual refractor.

With the press of a button, internal lenses can be changed quickly, so that the patient can actually see and compare their vision with the new correction to either unaided, or their current glasses prescription*.

*It requires data transfer from a NIDEK auto lensmeter or manual entry.
Please contact us for further information.

Current Vision

Corrected Vision

Patient's vision can be compared instantly!

■ Power convergence and power PD

During near point tests, power convergence and power PD are adjusted automatically.

■ R/L independent PD adjustment for improved precision

Right and left PD can be adjusted independently for more accurate and reliable measurements, preventing axis shift.

■ Clear, white LED illumination

Bright and energy efficient white LED illuminates the near chart for near point examination.

■ Easy maintenance

Effortless maintenance is made possible by antifogging protective glasses, and detachable forehead rest / face shields.

■ High quality near point card

Washable, plastic near point card is attached to the RT-3100's main body.
